DETAILED ACTION

1> This action is in response to Applicant's request for continued examination.

Claims 1, 3-7 and 9-12 are amended. Claims 13 and 15 are cancelled. Claims 16-19 are new. Claims 1, 3-7, 9-12 and 16-19 are presented for further examination.

2> This is a non-final rejection.

Continued Examination Under 37 CFR 1.114

3> A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3.30.2007 has been entered.

Allowable Subject Matter

4> Claims 1, 3-7, 9-12 and 16-19 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 2152

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

5> Claims 1, 3-7, 9-12 and 16-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Specifically, the claims cite storing and maintaining the memory contents of volatile memory during a reboot. However, as noted by Applicant in the remarks and in Applicant's specification, it is well accepted in the art that volatile memory will lose its contents when its power is interrupted, such as during a general reboot. The solution to this problem is what is known in the art as a soft or warm reboot whereby the period of interruption of power to the volatile memory is short enough to still maintain memory contents. The claim language, however, merely cites rebooting in general, which, as interpreted by one of ordinary skill in the art, would erase the entire contents of volatile memory, including Applicant's claimed trial run message. Thus, Applicant's claim language contradicts what is well known and accepted in the art. The claims should be amended to specifically state soft or warm rebooting as described in Applicant's specification.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 2152

6> Claims 1, 3-7, 9-12 and 16-19 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The independent claims recite that the action of the "non-volatile memory flagging an old binary file as a currently active file." This claim language should be amended because it is unclear as to how the non-volatile memory can be responsible for flagging the binary file as active. For instance, claim 3 recites "flagging, in the non-volatile memory, the new binary file as the currently active file." The language in claim 3 is clearer and does not result in any ambiguities.
